ICT Monitoring

Document version :	1.00
Implementation date :	31 Oct.2016
Document ref. :	SOP_ICT-004_ICT-Monitoring_v1.00_dd.18_Oct.2016

I. PURPOSE

This Standard Operating Procedure (SOP) describes how ICT monitoring is organized in Quipment.

II. SCOPE

This SOP is applicable to all ICT monitoring in Quipment SAS and in Quipment INC.

III. RESPONSIBILITIES

The responsibilities, mentioned in *italics*, are defined in the Functional Matrix as a role. The Functional Matrix indicates which persons are entitled to take on this responsibility.

IV. DEFINITIONS

All terms and abbreviations, used in this document, that may need clarification, are explained in a central document: "Quipment's Glossary of Terms and Abbreviations".

VI. PROCEDURE

1. Monitoring needs

- Monitoring of ICT systems at Quipment intends to:
  - evaluate the performance of the ICT system,
  - detect any relevant intrusion attempts,
  - detect possible threats,
  - detect any inappropriate use of the ICT system, and
  - detect any malfunctioning of the ICT system.
- The scope of the ICT monitoring at Quipment is divided in:
  - monitoring by Quipment's *ICT Management* and
  - monitoring by Quipment's Service Providers.
- Quipment's *ICT Management* monitors the following activities:
  - functioning of the servers, and
  - intrusion (attempts) on the Internal Server and on the Quipment network.
- Quipment's *ICT Management* ensures that Quipment's ICT service providers conduct their monitoring correctly.

2. Configuration of Monitoring Tool

- Server Monitoring:
  - For the monitoring of the different Quipment servers, *ICT Management* uses a commercial application that checks regularly the functioning of the specified servers and sends an alert to *ICT Management* in order to warn for possible malfunctions. Therefore *ICT Management* needs to identify the servers that the monitoring application needs to verify.
- Backup Monitoring:
  - Backup monitoring consists of verifying whether the scheduled backups have been conducted correctly or not. *ICT Management* establishes and updates regularly the procedure that defines what verifications must be conducted.

3. Monitoring

- The application that monitors the functioning of the servers, reports via alerts to *ICT Management* any malfunctioning of the servers such as:
  - Non-functioning, and
  - Important slow-down.

  Whenever *ICT Management* notices that there are abnormalities reported by the monitoring application, action is undertaken in order the remediate the situation.
- The verification of backup conformity are conducted by the *ICT Maintenance Officer* according to the procedure established by *ICT Management*.
- All monitoring that is conducted by the service providers is defined in the contracts with these providers. It is imperative that the service provider reports all possible and relevant instances to Quipment's *ICT Management*, as defined in the Service Level Agreement (SLA) or equivalent.

4. Interpretation of Monitoring Data

- *ICT Management* prioritizes reported monitoring results based on their potential impact on the well-functioning of Quipment's ICT system.

5. Monitoring detected issues?

- The monitoring detected issue is reported to the *ICT Maintenance Officer* as per SOP ICT-002 ICT Maintenance, Support and Repair.
- Appropriate action is taken in order to remediate the situation and to avoid it from reoccurring in the future. If the issue is considered of major importance by *ICT Management*, it is included in the CAPA system.
